

**PROTOCOL FOR THE CONTAMINATED SITES REGULATION
UNDER THE ENVIRONMENT ACT**

**PROTOCOL NO. 7:
Groundwater Monitoring Well Installation and Sampling**

Prepared pursuant to Part 6 – Administration, Section 21,
Contaminated Sites Regulation, OIC 2002/171

GROUNDWATER MONITORING WELL INSTALLATION AND SAMPLING

1.0 Introduction

Groundwater monitoring wells are installed at known or suspected contaminated sites in order to sample groundwater for contaminant analysis, determine groundwater levels and/or determine the direction of groundwater flow. These measurements are important for site monitoring and remediation. To ensure that groundwater measurements and samples are representative of actual conditions, monitoring wells must be installed correctly and appropriate sampling procedures must be followed. The following protocol is designed to ensure that appropriate and consistent standards are used for groundwater monitoring wells in the Yukon. This protocol has been adopted in accordance with Section 21(1)(b) of the *Contaminated Sites Regulation*, OIC 2002/171, which authorizes the Minister or his/her delegate to approve or adopt protocols for sampling soil, sediment, water, snow and other environmental media.

2.0 Standard for Installation of Groundwater Monitoring Wells

The following standard shall be used when installing a groundwater monitoring well: American Society of Testing and Materials (ASTM) standard **D5092-04e1 Standard Practice for Design and Installation of Ground Water Monitoring Wells**. This standard can be purchased on-line from the ASTM website www.astm.org.

3.0 Standard Sampling Practices

The following standard shall be used when obtaining samples from a groundwater monitoring well: ASTM standard **D4448-01 Standard Guide for Sampling Ground-Water Monitoring Wells**. This standard can be purchased on-line from the ASTM website www.astm.org.

The United States Environmental Protection Agency (USEPA) website also has some useful guidance documents pertaining to monitoring well sampling:

- a) **Practical Guide for Ground-water Sampling** – by Barcelona *et al.*, Illinois State Water Survey, 1985. 103pp. Available at: <http://www.epa.gov/swrust1/cat/pracgw.pdf> and,
- b) **Low Stress (low flow) Purging and Sampling Procedure for the Collection of Ground Water Samples from Monitoring Wells** – US EPA. July 1996. 13pp. Available at: <http://www.epa.gov/region01/measure/well/lowflow8.pdf>

4.0 Special Considerations

If someone wishes to install a monitoring well to a different standard than that described above, they must first obtain approval from the Department of Environment, Environmental Programs Branch.

Some consultants have established their own sampling protocols or may wish to use certain sampling methods that are not part of the ASTM standard. These may be used if they are equal to or better than the ASTM standard listed above, and if the relevant scientific literature regarding the change in sampling procedure or method has been submitted to and accepted by the Environmental Programs Branch. Additionally, such deviations from the ASTM standard must be documented in reports produced for the site.

5.0 Failure to Comply

When a monitoring well installed after the effective date of this protocol fails to meet the requirements described herein, the Environmental Programs Branch may reject any data derived from that well.

When groundwater sampling conducted after the effective date of this protocol fails to meet the requirements described herein, the Environmental Programs Branch may reject those sample results.

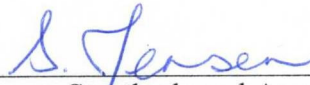

6.0 Effective Date

The effective date of this protocol shall be **April 14, 2008**, and it shall remain in effect until replaced or rescinded by the Environmental Programs Branch.

7.0 Additional Information

For more information on installation and sampling of groundwater monitoring wells, please contact:
